Caseum

Introducing a lightweight approach to software architecture

Leo Simons

SCHUBERG
PHILIS

Introduction

Key concepts

- **Multiple views:**
  - Use C4 for component diagrams

- **Lightweight approach:**
  - Don't use a digital diagram when a whiteboard picture will do

- **User-centric:**
  - Include UI designs since they help users understand

- **Standardise common best practices:**
  - Embeds established practices like Event Storming and Domain-Driven Design

Architecture = communication

Use simple, accessible tools:

- Architecture records design decisions

- Designs are recorded for people working on and with the software

- Prefer tools that untrained non-technical people can use

- Slack & Email over Documents
